SUMMARY

Senior AI Engineer at NTT DATA (Nippon Group) leading a team of 6, with around 8 years across software development, analytics, and Generative AI. MSc in Mathematical Modelling and Machine Learning (University College Cork). Experienced in building scalable ML systems, deploying production-grade models, and partnering with stakeholders to deliver measurable business impact. **Currently upskilling in DevOps for AI (Skillfyme, started Jan 2026)**. With 4 years in software engineering and about 4 years in analytics, ML, and AI engineering, Anish brings a unique blend of technical expertise and analytical problem-solving to the table.

- **Technical Skills:** Python, Git, LangChain, LangGraph, LangSmith, LLM, MCP, Pytest, Pydantic, PyTorch, Machine Learning, Deep Learning, GCP, Azure AI Foundry, Pandas, Numpy, Generative AI, RAG, prompt engineering, Pinecone vector database, BigQuery SQL, RESTful APIs, Local LLM inference such as Llama and Ollama, microservices concepts, model serving, statistical modelling, hypothesis testing, A/B testing mindset, Data Visualization, Power BI, dashboards/KPIs, Docker, Kubernetes, CI/CD fundamentals, Monitoring/Logging basics, Probability, Optimization.
- **Design Skills:** Statistical Modelling and Hypothesis Testing, Optimization, Calculus, Linear Algebra, Test Driven Development, Data Visualization, Object-Oriented Programming, Machine Learning and Deep Learning Architectures, and Design Patterns.
- **Soft Skills:** Adaptability, Time Management, Problem Solving, and Effective Communication.

WORK EXPERIENCE

1. **Senior AI Engineer | NTT Data, Nippon Group, India** **May 2025 – Present**
<https://nttdata-solutions.com/in-en/>

- Lead a 6-member delivery team building deep analytics pipelines and GenAI capabilities with tests using Pytest and Pydantic for client's yard shipment operations, translating business requirements into production-ready solutions.
- Implement a governed RAG/LLM/MCP (Model Context Protocol) workflow based "Ask the Data" layer using Python, PyTorch, LangChain, LangGraph, and LangSmith over structured and semi-structured enterprise data; engineer chunking, embeddings, retrieval, and prompt templates to return structured outputs (JSON/tables) with traceability to source data.
- Optimized transformations via vectorization and memory profiling, processing multi-million row BigQuery extracts using chunked/batch execution.
- Integrate analytics and GenAI services via RESTful APIs and microservices patterns; manage code and patches with Git/GitHub, and support delivery with Docker, Kubernetes, CI/CD fundamentals, logging/monitoring, and stakeholder KPI visibility through dashboards.
- Authored complex SQL with joins, aggregates, and window functions; optimized BigQuery performance via partitioning/clustering-aware queries and cost controls.

2. **Manager – Data Scientist FM3 | ITC Ltd – FPHL (CHQ), India** Dec 2022 – Jul 2024

<https://www.itchotels.com/in/en>

- Led an NLP-driven customer experience program, designing a ternary sentiment classification (positive/neutral/negative) using text preprocessing, tokenisation, feature engineering, and model evaluation (precision/recall/F1), delivered in 3 months and improved repeat customers by 5 %.
- Developed an in-house Python analytics solution to automate ETL/data pipelines, consolidating multi-source revenue data for 50+ hotels, improving data quality and reporting turnaround.
- Built Power BI dashboards with statistical KPI tracking, trend/variance analysis, cohort-style views, and drill-down reporting to support revenue, finance, and operations stakeholders.

3. **Data Science Analyst | Accenture, India**

Nov 2021 – Dec 2022

<https://www.accenture.com/in-en>

- Streamlined 100 % of the Business Intelligence reports such as Retail Value Tracking, B-B Pricing, and Price Variation across products using Power BI.
- Created 7 Business Intelligence reports for a giant CPG client, improving data processing and reporting efficiency with KNIME and Power BI.

4. **IT Consultant – Software Engineering | Markus Solutions, India**

Jul 2017 – Oct 2021

- Collaborated as a software development team member to build and maintain the full-stack application “COSYS Intelligent Systems” for an ITES client, using the company framework built on Spring Boot and the MEAN stack.
- Implemented backend services and UI features, wrote unit/integration tests, and helped achieve ~81% code coverage through test-driven improvements and peer code reviews.

EDUCATION

1. **University College Cork, Cork, Ireland**

Sep 2024 – Sep 2025

(UCC is Ireland's premier public research university. Established in 1845)

Degree: M.Sc. | Full-time | Mathematical Modelling and Machine Learning

- Member of UCC's MathSoc society, DataSoc society, and UCC Cricket club.
- Selected among top 50 to participate in **IRLCPC, Ireland 2025**.

2. **Birla Institute of Technology and Science Pilani, India**

May 2021 – Jun 2023

Degree: M.Tech | Work-Integrated | Data Science and Engineering

- Project(s): Change of Basis and Image Decomposition using Linear Algebra Techniques. (<https://github.com/ianisharya/bits-pilani-dissertation>).

3. **Kurukshetra University, India**

Aug 2013 – Jun 2017

Degree B.Tech. - Computer Science and Engineering

ACHIEVEMENTS

- Received “Big Applause for Excellent Work” for Client Value Creation for building Value Pricing modules with Award ID: TDCK-P44NDL-7HX3VK at Accenture, India.
- Awarded the “Tenacious Techno Star Award” for innovation in technology at Accenture India.
